# Dan Brandt

*UX / Product Designer*

**dbdoo.dev** · portfolio and case studies
dan.p.brandt@gmail.com · (913) 214-6037
linkedin.com/in/danpbrandt · Kansas City, KS

UX and product designer trained in graphic and web design who designs mobile and web products and builds them too. I shipped an Android home screen app to Google Play as its sole designer, shaped by beta tester feedback. Years in support and customer-facing roles taught me where people get stuck, and why.

## SELECTED WORK

**Doto Launcher** · Android home screen, Google Play — 2026 – present
Sole designer and developer · case study at dbdoo.dev/work/doto-launcher

- Designed a home screen that feels alive: a honeycomb of apps on a canvas that tilts in 3D and moves with music, taken from concept to release on Google Play.
- Ran a beta and turned tester feedback into shipped design changes: light themes for daylight use, controls moved within thumb reach, and a way to hold the screen still that one tester asked for three times.
- Replaced a seven-step onboarding tutorial with one-time hints that appear only when a gesture would help and disappear once used.
- Audited the appearance settings (15 overlapping controls, 6 names for one concept) and restructured them into complete looks plus six clearly named parts.
- Designed for accessibility: menus follow the phone's text size, touch targets are generous, and theme changes never override a user's motion settings.

**Wide** · Instagram carousel editor, Android beta — 2026
Sole designer and developer · case study at dbdoo.dev/work/wide

- Designed the whole carousel as one panorama, with a mini map, an iPod-style history dial and magnetic snapping.
- Borrowed print-style trim marks to keep slide edges readable on any photo, and merged layout editing with the export preview.
- Ran a UX consistency audit that unified animation timing across screens, and wrote a shared vocabulary naming every part of the interface.

**Bid Tracker** · client project, web — 2026
Design and development, working directly with the business owner

- Ran discovery with a contractor whose bids, costs and receipts were spread across spreadsheets and text messages.
- Designed a phone-first app on top of the Google Sheet the business already used, with budget bars, receipts attached to their costs, and separate views for the team and the owner. In daily use.

## EXPERIENCE

**Product Designer and Developer** · freelance — 2026 – present

- Design and build apps, tools and websites for small businesses and my own products, from discovery through prototypes, testing and release. Clients include an artisan metalworker, a children's book series and a speech-language practice.

**Technical Support Specialist** · Sunlighten — 2025 – 2026

- Guided owners through technical problems by phone, email and video, documenting each case and routing complex issues to the right team.

**Sales and Technical Consultant** · Google Fiber — 2022 – 2023

- Explained networking to home and business customers and helped with setup; consistently exceeded targets.

**Media Specialist** · Life Time — 2018 – 2019

- Produced training webinars and documentation for a multi-site company; shot and edited headshots.

## DESIGN

Interaction design
User flows
Prototyping
Usability and beta testing
Design audits
Design systems
Accessibility
UX writing
Visual and UI design
Typography
Motion design

## TOOLS

Figma
Photo editing
AI-assisted prototyping

## BUILD

I prototype and ship in code, so designs survive to release.

Kotlin and Android
Flutter and Dart
React and Next.js
HTML, CSS, JavaScript
Git and GitHub

## EDUCATION

**Graphic Design and Web Design, A.A.S.**
Hennepin Technical College, 2014 – 2018

**Full Stack Development Bootcamp**
University of Minnesota, 2024
